ADVANCE

Pinnacle
Technology

Summary

At this point, the Pinnacle blueprint has your business machine humming along nicely, but as you know, no plan is perfect. That's where Pinnacle ADVANCE comes into play. At this vital stage we collaborate to develop mutually beneficial strategies designed to consistently achieve your best results!

1 Continuous Improvement

Continuous improvement objectives yield technical and supply chain insights that drive quality, lower costs and support on-time delivery. Are you looking for a CM who will listen to and act upon your feedback? Pinnacle is the answer! We encourage customer involvement every step of the way. Whether it's on site collaboration in our NPI meetings, or monthly video conferences with the Pinnacle production team, we know that your involvement accelerates and heightens everyone's success.

2 Our Pain, Your Gain!

Let's talk about component distribution. A simple 'knowledge share' between our supply chain teams empowers us to craft a strategy that leverages your blanket orders against our vendor requirements. Pinnacle improves supply chain efficiency and in return, we share product discounts and/or improved credit terms.

3 Co-Op Testing

By testing your boards, Pinnacle can resolve any systemic production issues in real time and ensure you a fully functioning product before it leaves the facility. Additionally, we will share in fixture development and testing labor expenses – that's the power of collaboration.

4 Full or Partial System Assembly

Your PCBs look great... So what's next? We build out the product to completion and in doing so, solve common challenges to manufacturing operations:

***Quality • Cash Flow • Supply Chain Efficiency
Buildout Efficiency • ESD Compliance***
